90-100 g

Indeterminate tomato variety for single fruit/cluster harvesting. Fruit shiny red, weights around 90-100 gr. Elegant clusters with herringbone shape even in the upper parts. Their stems preserve a deep green colour in shelf life. Very rustic, the plant adapts itself well to autumn transplants and long cycles, and it is very resistant to low temperatures of winter in cold greenhouse. It has short and regular internodes even in the upper parts. Great stamina.
