20-22 g

30-32 mm

Red cluster harvesting tomato cherrytype. The fruit is shiny red, weight around 20-22 gr. and very long shelf life, one of the longest on market. Excellent as well its cracking resistance. The cluster is herringbone-shaped, very elegant and extended, with thick rachis and deep green and fleshy sepals. Its plant is very rustic with medium stamina and short internodes. Highly productive. It preserves an excellent blossoming even in the upper part. It adjusts well to long cycle.
