14-16 g

Technical information

Table tomato variety with indeterminate growth ideal for greenhouse cultivation. Baby plum type for harvesting in bunches or as single fruits. The bunch is arranged in a herringbone pattern with at least 14-16 fruits, weighing 14-16 g and with an intense red color, the rachis is thick and gives the bunch elegance and compactness. The fruits, of medium size, are characterized by an excellent flavor throughout the cultivation cycle. The fruits have good resistance to cracking and excellent post-harvest shelf life (Long Shelf Life at the highest market levels). The plant is very rustic, healthy and balanced, with covering leaves and medium-short internodes and adapts well to different cultivation periods, managing to color well even in summer.
