100-120 g

Calibre M

* variety under registration

Table tomato variety with indeterminate growth. It is characterized by short inter nodus and medium vigor with opaque but not excessively large leaves. The bunch is ordered in a herringbone pattern with 6-8 fruits and a very thick rachis, intense and persistent green. The fruit has a homogeneous round shape, an intense red color and a narrow and well-defined scar on the peduncle, therefore it is suitable for both single-fruit and cluster harvesting. The high homogeneity of size, the quality of the fruit and the excellent Long Shelf Life give it added value both for production and for marketing, even after long transports.
